

Freestyle M.O.M.[®] and ebay[™]

Easily sell products from Multichannel Order Manager (M.O.M.) on eBay

Seamless M.O.M. Integration

- Runs directly off the M.O.M. SQL Server database.
- Orders downloaded and automatically added into M.O.M. (8.05 or higher)
- Order download will create import file to be imported. (7.10)

Bulk Listing Features

- Create individual auction and 'buy it now' listings per product, or in bulk.
- Quickly relist expired items.
- Hide items currently listed from new bulk listing utility.

Inventory Management

- Item listing quantities updated based on inventory available in M.O.M.
- Set listing to automatically end if the quantities available in M.O.M. are lower than the minimum 'in stock' required to sell on eBay.

Image Management

- Easily add your items images in the M.O.M. Auction Lister client side application.
- Add up to 12 images to create a gallery on each item.

Shipment Updates

- Shipment information, including tracking number, can be uploaded to eBay when orders are processed in M.O.M.

Item Listing Templates

- Apply information to multiple items at once using global template settings - listing type, return policy, shipping methods, payments accepted, warranty information, etc.

Custom Scripting

- For an optional fee (through one of our partners) the merchant can perform complex tasks with custom scripting using VBA or VB.Net and/or apply scripts before and after order downloads, before and after order completion, or anytime you need to perform data manipulation tasks.
